

Climate change can seem like an insurmountable problem,

especially in today's über-connected digital world where information is at our fingertips at all times. While temperatures will continue to rise regardless of present-day action, we do still have time to change what happens in the long run. What the outdoors will look like in a few decades will depend on how we address our greenhouse gas emissions now.

By quickly transitioning to an economy powered by clean and renewable energy, we can limit temperature increases to protect the places and lifestyles we hold dear. One voice can make a difference, but millions of people acting together can change the world.

Now, more than ever, it is important that we become climate advocates and work to implement systemic change and climate solutions. We – the Outdoor Community – can help promote genuine and impactful societal changes, and here's how we can do it:

INFORM
YOURSELF

SEE THE
BIGGER
PICTURE

BE AWARE
OF YOUR
FOOTPRINT

RECOGNISE
YOUR
SUPERPOWER

USE YOUR
VOICE

TAKE
ACTION

Citizen science and literacy is a powerful way to contribute to our collective understanding of climate change. The changing climate affects us ecologically, socially and economically and a foundational understanding of the science can positively contribute to your own personal development, as well as those around you at work, at home, on the street or on the mountain. Sustainability is a constantly evolving field and thus offers us vast new opportunities and lessons to be learnt and applied in life!

We know that talking about climate change can be tough, whether it's with your family, friends and co-workers or with decision makers. But these very same people trust what we have to say—so let's take the opportunity to teach them what we've learned! More importantly, vote! Now, more than ever, your vote matters. Be them mandates, local or national elections, make sure to vote whenever you can in order to help protect the places in which you live and the lifestyles that you love. Since January 2021 Austria has been without a new climate conservation law and if this frustrates you as much as it does us, then get out there and use your voice and your vote.

Becoming a voice for your community, neighbourhood, town or even city can leverage even the smallest of opportunities to drive local changes, which collectively can encourage scalable improvements to local, regional or even national climate solutions. All of us play a role in how our community implements climate solutions as collectively we are stronger and so greater our ambitions and impact potential.

Learn more about Advocacy and POW Austria's current campaigns at protectourwinters.at. Or our European and international work at POW EU and POW Global at protectourwinters.eu and protectourwinters.org.

Dive a little deeper into climate change by reading the news, books or listening to a podcast on climate science and solutions. A well-versed Outdoor Community is better positioned to influence decision-makers! Below you can find our favourite resources for advocacy, awareness and knowledge which we compiled for you, but don't stop there!
